

Aziz Nechi

Site Reliability Engineer & Backend Developer Munich, Germany | aziz.nechi.pro@gmail.com | linkedin.com/in/aziz-nechi | github.com/yNeshy

Professional Summary

High-impact Site Reliability Engineer and Backend Developer with a proven track record of designing large-scale job orchestration tools, data governance pipelines, and enterprise AI monitoring infrastructure. Expert at maximizing system availability and building robust cloud-native applications with Python and Go.

Core Technical Skills

- **Languages:** Python, Go, SQL, Bash, C++, C# (.NET)
- **Infrastructure & SRE:** Distributed Systems, Job Orchestration, Cloud Infrastructure (Compute/Storage), Service Monitoring (SLOs/Probers), High-Availability Architecture
- **Data & Cloud:** AWS (S3), Apache Iceberg, Private Cloud Data Platforms, Relational Databases (MSQL)
- **Specializations:** Privacy Engineering, Data Governance, Incident Management, AI Safety & Observability

Professional Experience

Google

Site Reliability Engineer (SRE) - Core AI & Developer Infrastructure | 03/2025 - Present (Munich, Germany)

- **Automated Data Compliance:** Modernized a critical enterprise data deletion tool, automating the permanent hard-deletion of sensitive data and source code across distributed systems to guarantee privacy compliance.
- **Enterprise AI Safety & Monitoring:** Implemented comprehensive production monitoring frameworks for an internal LLM trained on corporate data, tracking performance and reliability metrics to ensure safe, compliant model interactions.
- **Job Orchestration Resilience:** Enhanced the stability of a core infrastructure job orchestration platform by implementing deadline propagation and early call cancellation, successfully preventing resource exhaustion and cascading failures.
- **Observability & Probing:** Developed and deployed end-to-end health and performance probes to provide real-time visibility into critical service Level Objectives (SLOs).
- **Code Quality & Testing:** Authored comprehensive unit test suites for core distributed orchestration components to maintain rigorous code quality and regression standards.
- **Incident Management:** Maintained 99.9%+ availability for foundational cloud-native developer infrastructure by serving as First Responder within high-priority global on-call rotations.

FactSet

R&D Software Engineer - Data Platforms | 01/2023 - 01/2025 (Paris, France)

- **Massive-Scale Data Migration:** Led the technical execution and architectural research of migrating a 2.3 Petabyte database from legacy Windows SQL servers to a private cloud data platform, reducing historical data preservation costs by 10x.
- **Data Lake Modernization:** Co-architected an Apache Iceberg data lake on AWS S3, reducing historical data analysis time by 50% for stakeholder, testing, and client interaction teams.
- **Security & Compliance:** Acted as team Security Ambassador, proactively identifying, documenting, and patching vulnerabilities across the entire data modernization pipeline.
- **Reliability Engineering:** Spearheaded the modernization of core data mining jobs, establishing a standard architecture that drastically minimized weekend operational bugs and enhanced error-logging clarity.

Powder

Junior Backend Engineer (Go & Web3) | 02/2022 - 01/2023 (Paris, France)

- **Microservices Design:** Engineered robust backend microservices using Go within a fast-paced, multidisciplinary startup environment.
- **Web3 Integration:** Architected and integrated secure Web3 wallet functionalities to manage user cryptographic assets and NFTs seamlessly.
- **AI-Driven Systems:** Developed and launched an automated quest-validation system leveraging real-time events from an AI-driven video highlight detection engine.

Blazing Boost SRL

Software Development Engineer (Freelance / Python & Django) | 10/2021 - 02/2022 (Milan, Italy)

- **Team Leadership:** Acted as Lead Backend Engineer for a 3-person team, guiding the end-to-end design, testing, and deployment of an internal chat platform and synchronized customer complaint portal.

- **Automated Content Moderation:** Built and trained a Machine Learning-based profanity filtering system achieving 80%+ accuracy on live data streams, significantly reducing manual moderation overhead and boosting customer satisfaction.

Selected Key Projects

Conversational LLM for SQL Generation

- Developed a conversational generative AI web interface allowing non-technical stakeholders to query complex data sets and receive immediate visual graphs.
- Successfully reduced the business's average data analysis turnaround time from 3 days to less than an hour.

Education

Institut National des Sciences Appliquées et de la Technologie (INSAT)

- **Diplôme d'Ingénieur (M.S. Equivalent) in Software Engineering** | 2018 - 2022
- **Preparatory Engineering Studies (Mathematics, Physics, & Computer Science)** | 2017 - 2018
